Comment Text :
-->Dear Dept of Energy:

Thank you for for having this public scoping form. I'll bet the quality of response would be much higher and more accurate if these forms were given to major newspapers throughout the country. I'm sure placing an announcement of intention along with a request for ideas or comments from the public into 5 large newspapers would enlighten you about the publics opinion and enlighten the public about your intentions.

I sure am glad that the Yucca mountains are far away from where I live, because, as we all know, nuclear waste is incredibly dangerous. It's SO dangerous that it's vital to Store it(because, as far as we are concerned, it never goes away) deep within the Earth in a non-populated area (because, as we all know, it's incredibly dangerous). Yes sir, I'm glad the people of some other state will have to deal with this incredibly dangerous waste and not me. I wonder how many people who work for the DOE live within 50 miles of the Yucca mountain? Well, if they do it's just their tough luck I suppose. When the public realizes the money to be made on this project their safety concerns will dissappear. And really why should they be nervous? Box cars filled with highly radioactive materials moving through their back yards by rail(at night!) on the way to Yucca. All this will be done with the efficiency of our postal service and the safety consciousness of NASA. This waste management is really much simpler than those complicated and dangerous Windmills and solar panals. It's a hell of a lot cheaper too!!!!
